CONTENTS

Volume I

Session 1. Worldwide Use of Polymers in Concrete

- 1.1 Status of Concrete-Polymer Composites in Japan 3
K. Okada and Y. Ohama
- 1.2 Status of Concrete-Polymer Materials in the United States 20
D. W. Fowler and D. R. Paul
- 1.3 The Advancing Concrete 35
W. O. Nutt
- 1.4 Research and Application of Polymer Concrete in China 46
Wang You-yun
- 1.5 Structural Properties of Concrete-Polymer Materials 56
I. A. Eldarwish and M. E. Shehata
- 1.6 Recent Applications of Concrete Polymer Materials by Water
and Power Resources Service 68
C. E. Selander
- 1.7 Resin Concrete Products in NTT 88
K. Imamura, M. Nakano and K. Tsuji
- 1.8 Resin Concrete and Polymer Impregnated Concrete:
A Comparative Study 99
L. Czarnecki and T. Broniewski
- 1.9 Standardization of Tests for Concrete Polymer Materials 111
G. W. DePuy
- 1.10 Some Applications of Epoxy Resins in Concrete and Other
Structures in India 123
P. C. Saxena, S. L. Mokhashi, S. T. Paliwal and M. M. Choudhary

Session 2. Properties and Applications of Polymer-Modified Concrete (Mortar)

- 2.1 Interaction between Calcium Hydroxide and Styrene-Methacrylate
Polymer Dispersion 141
S. Chandra, P. Flodin and L. Berntsson
- 2.2 Studies on the Mechanism of Reducing Drying Shrinkage of Cement
Mortar Modified by Rubber Latex 147
T. Kawano

2.3	A Proposal of New Test Method for Workability of Polymer-Modified Cement Mortar	163
	R. Naniwa	
2.4	Physical Properties of Polymer-Modified Mortars	178
	Y. Kasai, I. Matsui and Y. Fukushima	
2.5	Creep Characteristics of Polymer Modified Concrete under Uniaxial Compression	193
	P. S. Mangat, R. Baggott and D. A. Evans	
2.6	Adhesion Durability of Polymer-Modified Mortars through Ten-Year Outdoor Exposure	209
	Y. Ohama	
2.7	Incombustibility of Polymer-Modified Mortars	222
	Y. Ohama, S. Suzuki and Y. Izumi	
2.8	Synergistic Strengthening of Fiber Concrete by Polymer Emulsion	234
	J. K. Bhargava and A. Rehnström	
2.9	Drying Shrinkage of Steel Fiber Reinforced Polymer-Modified Mortars	250
	Y. Ohama and T. Sugahara	
2.10	Mechanical Properties of Cement Mortar Plates Reinforced by Polypropylene Fibrillated Film and Polymer Emulsion	261
	S. Ohgishi and H. Ono	
2.11	Experimental Manufacturing and Hydrostatic Pressure Test of Concrete Diving Shell Structures Constructed of Polymer-Modified Ferrocement	274
	M. Morinaga	
2.12	Resin Dispersion Modified Concretes under Traffic Simulation	291
	M. Gierloff	
2.13	Proposed Mix Proportioning of Polymer-Modified Concrete	311
	Y. Ohama, T. Nishimura, T. Miyake and S. Kan	
2.14	Special Binder for Grouting Ducts in Prestressed Concrete Structures	323
	A. M. Paillère and J. J. Serrano	
2.15	Polymer Modified Glass Fiber Reinforced Mortar Coatings Protect Navigation Lock Walls	331
	J. T. Dikeou and E. K. Schrader	
2.16	Application of Polymer-Modified Mortar in Renovation of a Concrete Structure Showing Deterioration due to Frost Action	347
	K. Hirai, M. Watanabe, K. Kawakami, Y. Kikuchi and K. Gotoh	
2.17	Polymer Cement Concrete for Industrial Floors	360
	J. Alexanderson	

2.18	Elements of General Theory of Polymercements as Binding Materials	374
	Yu. S. Cherkinskii	
2.19	Effect of Natural Rubber Latex on the Properties of Portland Cement Paste, Mortar and Concrete	380
	R. Sri Ravindrarajah	
2.20	Studies and Application of Polyacrylate Emulsion Cement Mortar	395
	Lin Baoyu, Zhuang Yinghao, Lu Anchi, Huang Shunying and Xu Changming	
2.21	Adhesion Strength of Polymeric and Polymer-Cement Compounds to Concrete	410
	G. I. Gorchakov, L. P. Orentliher and V. I. Loganina	
Session 3. Process Technology, Properties and Applications of Resin Concrete (Mortar)		
3.1	Low Temperature Curing of Polymer Concrete	421
	D. W. Fowler, A. H. Meyer and D. R. Paul	
3.2	Studies on Hardening Shrinkage Stress of Resin Concrete	435
	A. Watanabe and T. Yamasaki	
3.3	Low Shrinkage Mechanisms in Single-phase and Two-phase Unsaturated Polyester Resin Mortar Systems	447
	T. Okada and T. Konaka	
3.4	Adhesion Strength of Resin Mortar in Water	462
	T. Konaka, T. Okada, T. Matsuura and Y. Nojiri	
3.5	Stress and Strain Analysis between Cementitious Concrete and Polymer Concrete	477
	H. J. Peschke	
3.6	Studies on Cracking and Its Prevention Related to Diphenol A Polyester Mortar and Concrete	490
	Lou Xianneng	
3.7	Creep Studies on Polymer Mortars	504
	R. S. Ayyar and S. N. Deshpande	
3.8	Durability of Resin Concrete Exposed to Strong Acid Hot Water	524
	M. Kawakami, H. Tokuda and M. Kagaya	
3.9	Fundamental Studies on Structural Use of Resin Concrete	538
	K. Okada, K. Kobayashi and H. Tokunaga	
3.10	Stresses in Reinforcement and in Polyester Resin Concrete Generated by Setting Shrinkage	553
	W. Koyanagi, N. Murai, F. Hayashi and S. Ohno	

3.11	Carbon Fiber Reinforced Polymer Concrete	567
	M. Gunasekaran	
3.12	Reinforced Resin Concrete Research in NTT	572
	K. Imamura, M. Nakano and K. Tsuji	
3.13	Quick Setting Resin Mortar	584
	T. Matsuura and T. Konaka	
3.14	Strength of Quick-Setting Resin Mortar Tunnel	599
	Y. Nojiri, H. Kobayashi, T. Takatsuka and T. Hirose	
3.15	Field Trial of Polyester Concrete for Protection of Stilling Basin at Hydroelectric Power Station	614
	K. Demura, Y. Ohama, T. Yamamoto and M. Komiyama	
3.16	Polymer Concrete Applications in New Construction and Rehabilitating Old Structures of Railroad Operations	624
	W. Riesterer	
3.17	Fundamentals of P-Concrete Structure Formation and Factory Production Technology	637
	V. V. Paturoev and A. M. Fantalov	
3.18	Rising the Reliability of Hydrotechnical Structures Protected with P-Concrete Elements and Restored by Methods Using Polymer Composition Materials	652
	V. B. Reznik and A. I. Levchenko	
	Discussion	661

Volume 2

Session 3 (Continued)

3.19	Continuous Manufacturing Process for Polymer Concrete and Newest Applications	717
	R. Kreis	
3.20	Development of Polymer Concrete Electric Substation Structures	731
	M. Gunasekaran, J. G. Gilbert and A. G. Richenbacher	
3.21	Expansive Resin Concrete: Some Fundamental Questions	744
	L. Czarnecki	
3.22	Models of Degradation for Structural Polymer Concretes	757
	V. I. Solomatov, V. P. Seliaev and V. N. Juravleva	
3.23	Physicochemical Ways of Reducing Internal Stresses in Concretes with Thixotropic Binders	764
	L. A. Sukhareva, P. I. Zubov, V. V. Paturoev and N. G. Taraskina	
3.24	Polymer Concretes on the Basis of Water-Soluble Carbamide Resins	779
	I. Ye. Putlyayev and G. I. Solovyov	

3.25	Behaviour of Polyester Polymer Concrete at Temperature up to 70°C	790
	J. Hristova	
3.26	Abrasion-Erosion Resistance of Polymer Concretes	800
	T. C. Liu and T. B. Husbands	
3.27	Transport Construction Corrosion-Resisting Structure with Polymer Use	815
	A. V. Nosarev, A. S. Zhirov, Y. S. Shvidko and T. A. Krasovskaya	
3.28	Polymer Concretes in Water Construction	825
	I. M. Yelshin	
3.29	Armoured Polymeric Concrete Bearing Structures for Industrial Construction	832
	S. S. Davydov, A. I. Chebanenko, A. M. Fantalov and V. I. Kluckin	
3.30	Steel Fiber Reinforced Resin Concrete Pipes Obtained by Centrifugal Method	845
	W. Maciejewska, T. Broniewski and Z. Jamrozy	
3.31	Development and Testing of Polymer Concrete Electrical Insulators	860
	E. R. Perry and R. T. Becerra	

Session 4. Process Technology, Properties and Applications
of Polymer-Impregnated Concrete

4.1	Polymer Impregnation of Hardened Cement Pastes of Various Porosities	875
	R. Sh. Mikhail, S. A. Abo-El-Enein, A. M. Mousa and M. S. Marie	
4.2	Influence of High Temperatures on Mechanical Characteristics of Polymer-Impregnated Concrete	888
	A. Rio and S. Biagini	
4.3	Effect of Depth of Polymer Impregnation and Cracking on Corrosion of Reinforcing Steel	904
	K. Katawaki, D. W. Fowler and D. R. Paul	
4.4	Stress-Strain Behaviour of MMA-Impregnated Steel Fibre Reinforced Concrete	919
	H. Schorn and H. W. Vissmann	
4.5	Characteristics of Lightweight Impregnated Concretes and Their Application in Spatial Tridimensional Structures	928
	A. Rio, S. Musmeci and S. Biagini	
4.6	Investigations on the Structural Response of Polymer Impregnated Ferrocement for Chemical Storage and Transportation Applications	941
	B. V. Subrahmanyam, M. Neelamegam, N. P. Rajamane and J. A. Peter	

4.7	Properties and Applications of Polymer Impregnated Ceramics	957
	T. Hirano	
4.8	Process Technology for Production of PIC Pipes by Use of Closed Forms	967
	M. Ebara and T. Kawanami	
4.9	Partial Drying Impregnation Technology in Manufacture of 15-atm PIC Gas-Supply Pipes	974
	Zhuang Ju, Lei Yong-ming, Chen Xing, Tan Mo-hua and Huang Yiun-yuan	
4.10	Evaluation of PIC-Container for Containment and Disposal of Low and Intermediate Level Radioactive Wastes	987
	K. Araki, Y. Maki, Y. Shinji, K. Ishizaki, K. Minegishi and G. Sudoh	
4.11	Application of Polymer-Impregnated Concrete in China's Salt Lake Area	1000
	Han Yulan and Xu Yaping	
4.12	Influence of Structure-Forming Factors of Concrete on Polymer Impregnation	1011
	T. Broniewski, J. Olek and J. Śliwiński	
4.13	Examination of Quantitative Polymer Distribution in Finegrained Impregnated Concretes	1023
	J. Śliwiński	
4.14	Several Characteristics of Concrete Impregnated with Copolymer Based on Styrene	1033
	Chen Heyun, Pan Xuewen and Lu Huating	
4.15	Radiation-Chemical Treatment of Polymer-Impregnated Cement Composites	1048
	S. A. Abo-El-Enein, S. A. El-Hemaly, A. A. El-Miligy and M. R. Zaidan	
4.16	Mechanical Properties of PMMA in Polymer Impregnated Concrete	1063
	P. Sukiennik	
4.17	Optimum Conditions of Manufacturing Process for Polymer- and Sulphur-Impregnated Concretes	1074
	A. N. Volgushev and Yu. V. Maksimov	
4.18	Concrete Flagstones Impregnated with Methyl Methacrylate	1088
	J. Śliwiński	
4.19	PIC Application to Spillways of Gezhoba Project	1097
	Su Chongzhou	
4.20	Strengthening of Damaged Concrete by in situ Polymerization	1108
	T. S. Nagaraj and K. T. Sundara Raja Iyengar	

Session 5. Gypsum-Polymer Composite

- 5.1 Strength of Polymer Impregnated Gypsum-Slag Hardened-Mixture 1123
S. Seki and K. Ueda
- 5.2 Basic Study of Process Technology of Polymer-Impregnated Gypsum 1131
T. Yamamoto and Y. Ohama
- 5.3 Process Technology of Polymer-Impregnated Gypsum Mortars 1142
Y. Ohama, K. Oikawa and S. Katoh

Session 6. Concrete-Sulphur Composite

- 6.1 Properties and Temperature Stability of Sulphur Concrete 1155
R. N. Swamy and T. A. R. Jurgees
- 6.2 Corrosion Study of Sulphur Impregnated Concrete 1170
R. L. Yuan and W. F. Chen
- 6.3 Sulphur Concrete and Sulphur-Infiltrated Concrete 1185
V. M. Malhotra
- 6.4 Sulphur-Impregnated Lean Mortars and Concretes 1208
R. K. Ghosh, C. S. Pant and G. K. Tike
- 6.5 Properties of Cement Pastes, Mortars and Concretes Impregnated
with Sulphur 1223
T. Broniewski, J. Olek and J. Śliwiński

Session 7. Applications of Adhesives and Coating in Concrete Work

- 7.1 Reactivity and Fluidity of Liquid Epoxy Resins, and Fluidity
of the Hardener 1237
S. Inoue
- 7.2 Development of High Temperature Resistant and Room Temperature
Curable Epoxy Resin 1248
M. Sawaide and N. Arai
- 7.3 Application of Epoxy Resins in Strengthening of Concrete
Structures 1262
T. Iino and K. Otokawa

Session 8. New Applications of Concrete with Polymers

8.1	Properties of Polymers Used in Concrete	1279
	P. T. Chang, D. R. Paul and D. W. Fowler	
8.2	Applications of Foamed Epoxy Resin in Construction Field	1292
	M. Sawaide and I. Takano	
8.3	Properties of Lightweight Concrete Composed of Cement Paste and Expandable Polystyrene Beads, and Cured by Heat under Triaxial Restraint	1306
	T. Kawano	
8.4	Applications of Liquid Elastomer to Railway Tracks	1320
	K. Shimizu	
8.5	Influence of Superplasticizers on the Hydration of Cement	1333
	V. S. Ramachandran	
8.6	Study on the Workability of High Strength Concrete Containing Super-Plasticizer	1344
	A. Watanabe, S. Takayama and Myo Khin	
8.7	Strength and Behavior of Axially Loaded Columns of Very-High Strength Concrete	1355
	E. Limsuwan	
8.8	m-Polymers (Thermoplastic Modified Polydimethyl Siloxanes) for Application in Concrete Work	1366
	K. H. Wegehaupt	

Special Lecture

Applications of Concrete-Polymer Materials in Building and Construction	1383
Dr. D.W. Fowler, Advisory Committee; Professor, University of Texas at Austin; Chairman, Committee 548 (Polymers in Concrete), American Concrete Institute	

Discussion (Continued)	1411
