TABLE OF CONTENTS

1. INTRODUCTION	1
2. NATURAL AND SYNTHETIC POLYMERS	5
2.1 Natural Polymers	5
2.1.1 The Oldest Natural Polymer, Bitumen	5
2.1.2 Use of Asphalt as an Impregnation Material	8
2.1.3 Materials Used in the Great Wall of China	11
2.1.4 Materials Used in India	13
2.1.5 Materials Used in Other Places	14
2.2 Synthetic Polymers	18
2.2.1 Soil Stabilization with Synthetic Polymers	18
2.2.2 Early Use of Synthetic Polymers in Concrete	18
2.2.3 Thermoplastics, Thermosets, and Elastomers	19
2.2.4 Water-Soluble Polymers	23
2.3 Concluding Remarks	23
3. DURABILITY PROBLEMS IN CONCRETE	27
3.1 Chemical Additives	28
3.2 Carbonation	29
3.3 Industrial Gases	29
3.4 Alkali-Aggregate Reaction	29
3.5 Water as an Agent of Deterioration	29
3.6 Need for Long-Term Research	29
3.7 Choice of Building Site	31
3.8 Errors in Design and Poor Workmanship	31
3.9 Some Cases	32
3.9.1 Bridges	32
3.9.2 Concrete Balconies	35
3.10 Reinforced Concrete Chimneys	36
3.11 Poor-Quality Aggregates	37
3.12 Corrosion of Steel Reinforcement	38
3.13 Freeze-Thaw Resistance	40
3.14 Concluding Remarks	42
4. MECHANISMS OF CONCRETE DETERIORATION	49
4.1 Carbonation of Concrete	49
4.1.1 Chemical Reaction	49
4.1.2 pH Profile	52
4.1.3 Shrinkage-Humidity Relationship	52
4.1.4 Effects of Cracks	53
4.2 Chloride-Induced Corrosion	54
4.3 Alkali-Aggregate Reaction	57

4.3.1	Alkali-Silica Reaction	58
4.3.2	Alkali-Carbonate Reaction	59
4.3.3	Alkali-Silicate Reaction	60
4.4	Freeze-Thaw Attack	61
4.4.1	Hydraulic Pressure	61
4.4.2	Osmotic Pressure	62
4.4.3	Chemical Interactions	63
4.5	Erosion and Cavitation	67
4.6	Chemical Attacks	68
4.6.1	Pollution and Acid Attack	68
4.6.2	Sulfate Attack	71
4.6.3	Ammonium Salts Attack	73
4.6.3.1	Ammonium Sulfate Action	73
4.6.3.2	Ammonium Chloride Action	73
4.6.3.3	Ammonium Nitrate Action	74
4.7	Efflorescence	74
4.8	Concluding Remarks	76
5.	CLASSIFICATION OF CONCRETE-POLYMER COMPOSITES	81
5.1	Polymer-Modified (or Cement) Mortar and Concrete	81
5.1.1	Definition	81
5.1.2	Principles of Polymer Modification	83
5.1.2.1	Latex Modification	83
5.1.2.2	Modification with Redispersible Polymer Powders	86
5.1.2.3	Modification with Water-Soluble Polymers	87
5.1.2.4	Modification with Liquid Resins	87
5.1.2.5	Modification with Monomers	87
5.1.3	Process Technology	88
5.1.3.1	Materials	88
5.1.3.2	Mix Proportioning	90
5.1.3.3	Mixing	90
5.1.3.4	Placing and Curing	92
5.2	Polymer Mortar and Concrete	94
5.2.1	Definition	94
5.2.2	Principle of Polymer Replacement	94
5.2.3	Process Technology	95
5.2.3.1	Materials	95
5.2.3.2	Mix Proportioning	98
5.2.3.3	Mixing	99
5.2.3.4	Placing and Curing	99
5.3	Polymer-Impregnated Mortar and Concrete	102
5.3.1	Definition	102
5.3.2	Principle of Polymer Impregnation	103

5.3.3	Process Technology	104
5.3.3.1	Materials	104
5.3.3.2	Manufacturing Process for Precast Products	105
5.3.3.3	Field Polymer Impregnation Process	106
6.	PROPERTIES OF CONCRETE-POLYMER COMPOSITES	111
6.1	Properties of Polymer-Modified Mortar and Concrete	111
6.1.1	Properties of Fresh Mortar and Concrete Using Polymer Latexes	111
6.1.1.1	Workability	111
6.1.1.2	Air Entrainment	111
6.1.1.3	Water Retention	112
6.1.1.4	Bleeding and Segregation	112
6.1.1.5	Setting Behavior	112
6.1.2	Properties of Hardened Mortar and Concrete Using Polymer Latexes	113
6.1.2.1	Strength	113
6.1.2.2	Deformability, Modulus of Elasticity, and Poisson's Ratio	116
6.1.2.3	Shrinkage, Creep, and Thermal Expansion	118
6.1.2.4	Waterproofness and Water Resistance	118
6.1.2.5	Resistance to Chloride Ion Penetration and Carbonation	123
6.1.2.6	Pore Size Distribution and Oxygen Diffusion Resistance	123
6.1.2.7	Adhesion	125
6.1.2.8	Impact Resistance	126
6.1.2.9	Abrasion Resistance	127
6.1.2.10	Chemical Resistance	127
6.1.2.11	Thermal Resistance and Fire Resistance	128
6.1.2.12	Freeze-Thaw Durability and Weatherability	130
6.1.3	Properties of Redispersible Polymer Powder- Modified Systems	134
6.1.4	Properties of Water-Soluble Polymer-Modified Systems	134
6.1.5	Properties of Liquid Resin-Modified Systems	135
6.2	Properties of Polymer Mortar and Concrete	135
6.2.1	Properties of Fresh Mortar and Concrete	136
6.2.1.1	Workability	136
6.2.1.2	Working Life and Hardening Time	136
6.2.1.3	Bleeding and Segregation	136
6.2.1.4	Setting or Hardening Shrinkage	136
6.2.2	Properties of Hardened Mortar and Concrete	138
6.2.2.1	Strength	138

6.2.2.2	Deformability, Elastic Modulus and Creep	139
6.2.2.3	Watertightness, Gas-Tightness, Freeze-Thaw Durability, and Water Resistance	140
6.2.2.4	Adhesion or Bond	141
6.2.2.5	Chemical Resistance	142
6.2.2.6	Abrasion Resistance, Impact Resistance, and Electrical Insulating Properties	142
6.2.2.7	Incombustibility and Fire Resistance	142
6.2.2.8	Weatherability or Weather Resistance	143
6.3	Properties of Polymer-Impregnated Concrete and Mortar	143
7.	MECHANISMS OF CONCRETE-POLYMER INTERACTIONS	147
7.1	Hydration of Portland Cement	147
7.1.1	Hydration of Tricalcium Silicate	147
7.1.1.1	Initial Period of Reactivity	147
7.1.1.2	Induction or Dormant Period	147
7.1.1.3	Acceleration Period	148
7.1.1.4	Final Stage	148
7.1.2	Hydration of Tricalcium Aluminate	149
7.2	Interaction	150
7.2.1	Polymer-Impregnated Concrete	150
7.2.2	Polymers Mixed in Concrete	150
7.2.3	Accelerators and Retarders	151
7.3	Natural Polymers	152
7.4	Synthetic Polymers	156
7.4.1	Interaction between Calcium Hydroxide and Polymer Dispersion	156
7.4.2	Interaction between Calcium Silicates and Polymer	160
7.4.3	Interaction between Tricalcium Aluminate and Polymers	164
7.4.4	Interaction with Portland Cement	169
7.5	Concluding Remarks	181
8.	PRACTICAL APPLICATIONS OF CONCRETE-POLYMER COMPOSITES	187
8.1	Applications of Polymer-Modified Mortar and Concrete	187
8.2	Applications of Polymer Mortar and Concrete	189
8.3	Applications of Polymer-Impregnated Mortar and Concrete	191
	INDEX	195
